GIF

Green Innovation in the Fashion industry management

CONTACT US

About the project

GIF project will develop online training courses and a training kit for the development of new approaches and ideas to a "greener" textile sector. GIF will carry out new ideas and training for stakeholders who will learn how to reduce their emissions and pollution through e-learning courses, best practices, innovative green initiative, multiplier events and exchanges of information and excellence in the specific sector.

The main objective of the project is to **impact on the SMEs** in the fashion/textile sector

Most of the textile sector producers are small and medium enterprises, sometimes innovative but mostly traditional that, during last years, suddenly started growing due to the massive request of fast fashion textile products.

Project Results

01 Competence Framework design and development

GIF Competence Framework will be based on existing experiences, reviewed and integrated in a usable set of competences, sub-competences and descriptors.

02 Training kit design, development and testing

The Training Kit will help trainers in contextualizing and implementing GIF approaches in their courses. A Methodology report, the GIF Training Kit, will be the practical implementation of the Competence Framework, proposed to a pilot group of trainees.
